December 4, 2017

Dear Customer,

In response to your inquiry, following is PTCA's and Enduro Industries' statement on "recycle content" of its steel tubing and bar products.

PTC Alliance produces steel tubing and chrome-plated steel tubing and bar, from BOF and EAF steel. Information published by the Steel Recycling Institute (SRI) indicates that products manufactured with BOF steel average 27% recycled content value (based on 14.4% pre-consumer recycle, and 19.8% post-consumer recycle content). Likewise, products manufactured from EAF steel average 78.8% recycled content value (based on 69.0% pre-consumer recycle, and 19.5% post-consumer recycle content).

For more information on LEED certification credits for steel products, see: <http://www.recycle-steel.org/>, and more specifically the brochure "Steel Takes LEED with Recycled Content," October 2012, based on steel industry data for 2011 at: http://www.recycle-steel.org/Recycling%20Resources/~/.media/Files/SRI/Media%20Center/LEED_Oct2012.pdf
